students not just how to collect and analyze data, but how to actively think about them. Each chapter presents one "method of mind" (thinking analytically, realistically, symbolically, ethically, multidisciplinary, artistically, summarily, interpretively, and narratively), together

with applications, a vignette or story related to the thinking modality, points to remember, and exercises. Designed to help researchers "rise above the data," the book explores how qualitative research designs, data collection, data analyses, and write-ups can be enriched

The Shroud of Turin is the most important and studied relic in the world. The many scientific studies on the relic until today have failed to provide conclusive answers about the identity of the

**enveloped man
and the dynamics
regarding the
image impressed
therein. This
book not only
addresses these
issues in a
scientific and
objective manner
but also leads the
reader through
new search paths.**

In the second edition, besides including some of the most recent findings on the Shroud, the authors follow the many tips and comments received from readers. The Shroud's dating by means of

alternative methods has not been free from controversies, some of which have even implied the non-authenticity of the Shroud's samples tested. So the authors duly expand Chapter 7 to

include the proof of the origin of the samples used in the recent scientific research and also address the provenance and the path of the original sample. Furthermore, a new section contains a

authors that is
the result of the
interesting and
praiseworthy
work of a
Bavarian high
school student.
Although there
are many books
on the subject,
none contains**

such a formidable quantity of scientific news and reports.

Unique in its genre, this book is a powerful tool for those who want to study the Turin Shroud deeply.
