This model includes: an environment of care designed to promote improved function for older patients; an interdisciplinary team that works together to identify/address the vulnerabilities of the older patients; nursing care plans for prevention of disability; early planning to help prepare the patient to return home and a review of medical care to prevent iatrogenic illness. Acute Care for Elders: A Model for Interdisciplinary Care is an essential new resource aimed at assisting providers in developing and sustaining an ACE program. The interdisciplinary approach provides an introduction to the key vulnerabilities of older adults and defines the lessons learned from the Acute Care for Elders model. "Health assessment of patients falls under the purview of both physicians and nurses. Assessment of patients varies based on both role and setting. While some nurses end up practicing in extended (eg, nurse practitioner) or specialized (eg, cardiac care) roles, others maintain a more traditional role in an outpatient clinic. Despite the eventual role, all nursing students must learn how to administer a complete general health assessment"--
