

Old Problems New Challenges

In Indonesia's Overseas Labour Migration Programme, 1969-2010, Wayne Palmer offers for the first time a detailed, critical analysis of the way in which Indonesia's Overseas Labour Migration Programme is administered and how it fits with other developments within the Indonesian government.

TRADITION AND TRANSITION IN PASTORAL SOCIETIES Changing pastoral dynamics make knowledge of pastoralism vital to understanding landscapes, development and governance across dryland regions. *Modern Pastoralism and Conservation: Old Problems, New Challenges* presents new pastoral research from Africa, the Middle East and Asia. The volume (previously published in China) addresses the nature and viability of pastoralism in practice and examines current pastoral conditions in diverse locations. Pastoralists engage with changing climatic and environmental conditions whilst encountering policy, population and socio-economic challenges. Issues of transformation and sustainability are at the heart of the book, whose chapters highlight the contemporary practice of pastoralism in order to enhance understanding of this unique livelihood and lifestyle. The Commission on Nomadic Peoples (CNP), part of the International Union of Anthropological and Ethnological Union Sciences

Online Library Old Problems New Challenges

(IUAES), unites researchers, practitioners, government and non-government organisations to further pastoral knowledge. As Commission members, the authors have had extensive interactions with and possess rich experience of diverse pastoral societies. This book's chapters originate in papers presented at CNP sessions during the 2009 IUAES Congress in Kunming, China. Two perspectives were stressed: pastoralism in an international context and in the host nation, China. This approach identified both the impact of rapid development on nomadic practices and livelihoods in China and the country's growing integration into the global pastoral research community. *Modern Pastoralism and Conservation: Old Problems, New Challenges* builds an international perspective on the wide-ranging approaches and challenges to traditional pastoralism in the twenty-first century.

Examines Indonesia's business environment since reformasi began in 1998 - what stayed the same, what changed and what could change. Includes insights of distinguished and stimulating speakers from business, independent research organisations, and academic institutions in Indonesia, Australia and elsewhere. Eng from ANU.

This book reviews United States-China relations since 1970 and examines the requirements for improving those relations, proposing goals for our dealings with

the People's Republic and for a four-power balance in East Asia.

Forensic medicine is a continuously evolving science that is constantly being updated and improved, not only as a result of technological and scientific advances (which bring almost immediate repercussions) but also because of developments in the social and legal spheres. This book contains innovative perspectives and approaches to classic topics and problems in forensic medicine, offering reflections about the potential and limits of emerging areas in forensic expert research; it transmits the experience of some countries in the domain of cutting-

edge expert intervention, and shows how research in other fields of knowledge may have very relevant implications for this practice.

In Environmental Federalism, Luke Fowler helps to refocus much needed attention on the role of state governments in environmental policy creation and implementation in the United States. While the national government receives most of the attention when it comes to environmental policy, state governments play a vital role in protecting our natural resources. Legacy problems, like air, water, and land pollution, present one set of challenges for environmental federalism, but new problems emerging as a result of climate change further test the bounds of federal institutions. Examining patterns of pollution and case studies from the Clean Air Act and the Clean Water Act, Fowler explores two questions: has environmental federalism worked in managing legacy environmental problems, and can it work to manage climate change? In order to answer these questions, Fowler extends James Lester's typology using political incentives and administrative capacities to identify four types of states (progressive, delayers, strugglers, & regressives), and assesses how they are linked to the success of federal environmental programs and conflicts in intergovernmental relations. He then considers what lessons we can learn from these programs and whether those lessons can help us better understand climate policy and multi-level institutions for environmental governance. This timely read will be a valuable contribution to students, researchers and scholars of political science, public policy, public administration, and environmental studies.

Scarcity in the Modern World brings together world-renowned scholars to examine how concerns about the scarcity of environmental resources such as water, food, energy and materials have developed, and subsequently been managed, from the 18th to the 21st century. These multi-disciplinary contributions situate contemporary concerns about scarcity within their longer history, and address recent forecasts and debates surrounding the future scarcity of fossil fuels, renewable energy and water up to 2075. This book offers a fresh way of tackling the current challenge of meeting global needs in an increasingly resource-stressed environment. By bringing together scholars from a variety of academic disciplines, this volume provides an innovative multi-disciplinary perspective that corrects previous scholarship which has discussed scientific and cultural issues separately. In doing so, it recognizes that this challenge is complex and cannot be addressed by a single discipline, but requires a concerted effort to think about its political and social, as well as technical and economic dimensions. This volume is essential for all students and scholars of environmental and economic history.

With the 2004 Presidential Election just around the corner and a host of critically

important challenges facing the presidency today, the top names in presidential studies have come together—for the first time ever in a single book—to examine those challenges and explore what they might mean for the American people. Edited by George Edwards and Philip John Davies, this collection of original essays concentrates on the current Bush presidency and uniquely tackles the particular issues the presidency faces today.

Fascinating, thought-provoking, and groundbreaking, *New Challenges for the American Presidency* is essential reading for anyone interested in examining George W. Bush's presidency, the issues that will figure prominently in the 2004 election, and the future of the executive office.

A thoroughly updated introduction to the current issues and challenges facing managers and administrators in the investor and publicly owned utility industry, this engaging volume addresses management concerns in five sectors of the utility industry: elec

Age Estimation: A Multidisciplinary Approach is the only reference in the field covering all techniques and methods involving age estimation from different perspectives. This book provides comprehensive coverage of all aspects of age estimation, including aging the living and the dead, human rights, scientific rationale of the estimates, and skeletal, dental age and biochemical techniques and methods. Each chapter is written by internationally known expert contributors, making this book a one-of-a-kind resource for those involved in estimating the age of the living and the dead. Presents a concentration of all techniques and methods involving age estimation in a single volume Provides a multidisciplinary approach that lends itself to researchers, practitioners and students from a variety of different fields Includes contributions by world renowned forensic specialists

The Russian Orthodox Church has survived more than seventy years of the most brutal and sustained attempts to eradicate religion that has ever been. Weakened but spiritually alive, it is confronted by the demands of a ravaged, exhausted society. Can it, however, find the resources and energy to respond to these demands? Jane Ellis describes the developments and problems in the Russian Orthodox Church under glasnost and especially since the new freedoms were granted following the millennium celebrations of 1988. New opportunities mean new challenges and

Online Library Old Problems New Challenges

demand huge new resources. Old problems in the form of close State and KGB contacts remain, and new problems in the form of competition from other denominations and sects arise. Traditionally the Orthodox Church has enjoyed a 'symphony' with the State. However are unhealthy links with the KGB and the communist past still damaging the Church. Is it in danger of becoming a state church?

A thoroughly updated introduction to the current issues and challenges facing managers and administrators in the investor and publicly owned utility industry, this engaging volume addresses management concerns in five sectors of the utility industry: electric power, natural gas, water, wastewater systems and public transit.

Forensic medicine explores the legal aspects of medicine, and medicolegal investigation of death is the most significant and crucial function of it. The nature of post mortem examinations are changing and the understanding of causes of death are evolving with the increase of knowledge, availability, and use of various analyses including genetic testing. Postmortem examination practice is turning into a more multidisciplinary approach for investigations, which are becoming more evidence based. Although there are numerous publications about forensic medicine and post mortem examination, this book aims to provide some basic information on post mortem examination and current developments in some important and special areas. It is considered that this book will be useful for forensic pathologists, clinicians, attorneys, law enforcement officers, and medical students.
