

Striking The Right Balance

This study of British defence policy argues that a "one-off" defence review is not enough but a regular process of defece reviews every five years provide a long-term strategic direction which, the author maintains, is lacking at present.

Bridge the great divide between distanced administrative duties and daily classroom impact. This book introduces a top-down power mechanism called defined autonomy, a concept that focuses on district-defined, nonnegotiable, common goals and a system of accountability supported by assessment tools. Defined autonomy creates an effective balance of centralized direction and individualized empowerment that allows building-level staff the stylistic freedom to respond quickly and effectively to student failure.

Professor Ullrich is thoughtful and attracted star scholars from many countries, so the papers and discussion are provocative and introduce recent economic thinking, although many are written by lawyers. . . The text is lucid and interesting, the thought innovative and anyone seriously interested in competition policy should read these papers and the comments with pleasure. Valentine Korah, World Competition This collection of papers and comments deserves to be widely read, and it should appeal to academics and practitioners alike. The great mix of topics and the variety of views offered make this a very stimulating contribution to the discussion of the new paradigm of EC competition law, the more economic approach, and its implications for the application and interpretation of the various EU antitrust rules. Thomas Eilmansberger, European Law Journal The editor should be congratulated for bringing together this diverse group of scholars whose spirited disagreements remind one of the many challenges faced in exploring the role and function of competition law. Giorgio Monti, European Review of Contract Law With contributions from leading scholars from all over Europe and the US, this book covers the major areas of substantive competition law from an evolutionary perspective. The leitmotiv of the book has been to assess the dividing line between safeguarding and regulating competition, which it does by reviewing the following subjects: foundations of competition policy in the EU and the US strategic competition policy the evolution of European competition law from a national (Italian) perspective the block exemption of vertical agreements after four years the new Technology Transfer Block Exemption cooperative networking mergers in the media sector abuse of market power concepts of competition in sector specific regulation competition, regulation and systems coherence efficiency claims in EU competition law and sector specific regulation. The Evolution of European Competition Law will be of great interest to lawyers, economists, academics, judges and public officials working in the fields of competition law and policy.

Despite relatively fast economic growth over the past few years, Cape Verde's public debt to GDP ratio has risen rapidly. Achieving an appropriate balance among public investment, growth, and debt sustainability has become a priority for the Cape Verdean authorities. The IMF-World Bank debt sustainability analysis (DSA) framework has helped the authorities monitor the risks of debt stress. However, the DSA has a number of limitations. This paper intends to complement the DSA by addressing aspects currently not covered by the DSA. The paper evaluates public investment scaling-up strategies in Cape Verde by customizing the Buffie and others (2012) model for Cape Verde and conducting various scenario and sensitivity analysis. The paper assesses Cape Verde's public debt risks, taking into account the link between public investment and growth. The paper concludes that the size of scaling-up and aspects of the economic structure have significant impact on the outcome of the public investment. A very large surge in public investment may lead to a debt to GDP ratio that reaches dangerous levels based on the usual DSA criteria. A more moderate scaling-up of public investment may contribute better to stable and sustained growth over the medium and long run. In addition, it is critical that the authorities ensure the quality of public investment.

This book pools the current know-how, and closes important knowledge gaps, to offer hands-on advice and practical answers to the many 'how to' questions relating to merger implementation. It provides a crucially important understanding of how to assess the chances of realising synergy potential and evaluate integration risks.

Project-Based Learning in the Math Classroom (grades 6 - 10) explains how to keep inquiry at the heart of mathematics teaching and helps teachers build students' abilities to be true mathematicians. This book outlines basic teaching strategies, such as questioning and exploration of concepts. It also provides advanced strategies for teachers who are already implementing inquiry-based methods. Project-Based Learning in the Math Classroom includes practical advice about strategies the authors have used in their own classrooms, and each chapter features strategies that can be implemented immediately. Teaching in a project-based environment means using great teaching practices. The authors impart strategies that assist teachers in planning standards-based lessons, encouraging wonder and curiosity, providing a safe environment where failure occurs, and giving students opportunities for revision and reflection.

At a time of rapid global change, development NGOs are having to scale up their impact, diversify their activities, respond to long-term crises and improve their performance on all fronts. Striking a Balance offers both analysis and a practical guide to how NGOs can fulfil these demanding expectations. Written for all those involved with NGDO work, the book describes the objectives of sustainablepeople-centred development and the process required to achieve it, focusing on the five factors which determine effectiveness: suitable organisational design; competent leadership and human resources; appropriate external relationships; mobilisation of high quality finance; and the measurement of performance coupled to 'learning for leverage'. In each are the book explains the capacities needed and how they can be assessed and improved. Effectiveness calls for NGOs which retain their non-profit values, establish the right type of Professionalism, manage dilemmas and balance choices to continually reflect the priorities, rights and needs of those who give them legitimacy: people who are poor and marginalised. This book provides a reference of current and future practices which will help NGOs to do so.

"Discusses reasons why Americans struggle to find balance between work, life, and family commitments, and proposes policy solutions to solve the problem. Includes index, bibliography, and tables"--Provided by publisher.
