It is often forgotten how much we, as a species, owe to the great and majestic animal that is the horse. Indeed, the rise of modern civilization is much indebted to this wondrous creature. It is one that can fly without wings and thunder without clouds. It needs no speech to strike our own away, nor requires any wind to draw the very breath out of us. But how much do we actually know about the horse? Today, countless members of the human race attempt to understand and comprehend how we can live and work in harmony with one of the most amazing animals ever to come into existence. In Horses, Humans, and Harmony, equestrian Michael Kibler does just that. By breaking down natural horse psychology, human reactions, and the best way to adapt them both, Michael encourages the development of a healthy and happy bond between horses and humans. Don't work on horses, work with them!

*Originally designed as a protective, decorative cover for the back of a chair, this dragon design would make a wonderful lace curtain for today's home. Originally designed by Mrs. G. W. Miller, the pattern required extensive corrections to make it workable. This is not your usual scanned vintage crochet pattern. To make this pattern great for today's crocheter I wrote complete instructions, expanded the written instructions so you won't need to skip around, and made an easy to follow chart. I also changed the written instructions to use modern US crochet terms. The only stitches you need to know to complete this lace are: chain stitch, single crochet, double crochet, treble crochet and slip stitch.*

*Winner of the Euler Book Prize -- Awarded by the Mathematical Association of America With more than 200 full color photographs, this non-traditional, tactile introduction to non-Euclidean geometries also covers early development of geometry and connections between geometry, art, nature, and sciences. For the crafter or would-be crafter, there are detailed instructions for how to crochet various geometric models and how to use them in explorations. From the Foreword by William Thurston: "These models have a fascination far beyond their visual appearance. As illustrated in the book, there is actually negative curvature and hyperbolic geometry all around us, but people generally see it without seeing it. You will develop an entirely new understanding by actually following the simple instructions and crocheting! The models are deceptively interesting. Perhaps you will come up with your own variations and ideas. In any case, I hope this book gives you pause for thought and changes your way of thinking about mathematics."*

To those fishermen who have to make precious the time they have astream, this book should prove invaluable. Aziz uses a number of unique tactics and lures to catch fish. He focuses most of his efforts on fly-fishing, fly tying, spin fishing and bait fishing. Many of the flies that are illustrated and described in this book are of local New England origin and have never before been presented in any national publication. They have proven their worth over time and will improve the success rate of even the most experienced angler. It is a tale of hope and courage, of omens, dreams and superstition, and one in which you may at last be persuaded to believe that wolves know more about nature and the earth than men.
